Overview

Staff Augmentation is the use of outside personnel on a temporary basis with the purpose to increase the capacity of an organization. It usually means adding resources to the in-house IT team to help manage the workload in a specific project. IT Factory offers Staff Augmentation assistance to Clients in the variety of technical fields, among them programming, system design and integration, database optimization and others.

While our offer can help bring in software development engineers to meet your short-term needs, it would also give you the opportunity to find and recruit future permanent employees to support and maintain critical systems and applications.

Challenge

Companies of various sizes, both the small ones as well as big corporations, are in constant need of finding qualified IT specialists to participate in on-going projects. Finding and employing suitable candidates is often a huge issue for an organization. It turns out that hiring new full-time employees for a specific project may not be a proper path to take, and this is often due to budget constraints, or company's policy and priorities. Creating a new position always incurs significant costs, including interviewing candidates, providing equipment, benefits, vacation pay, and meeting high financial expectations.

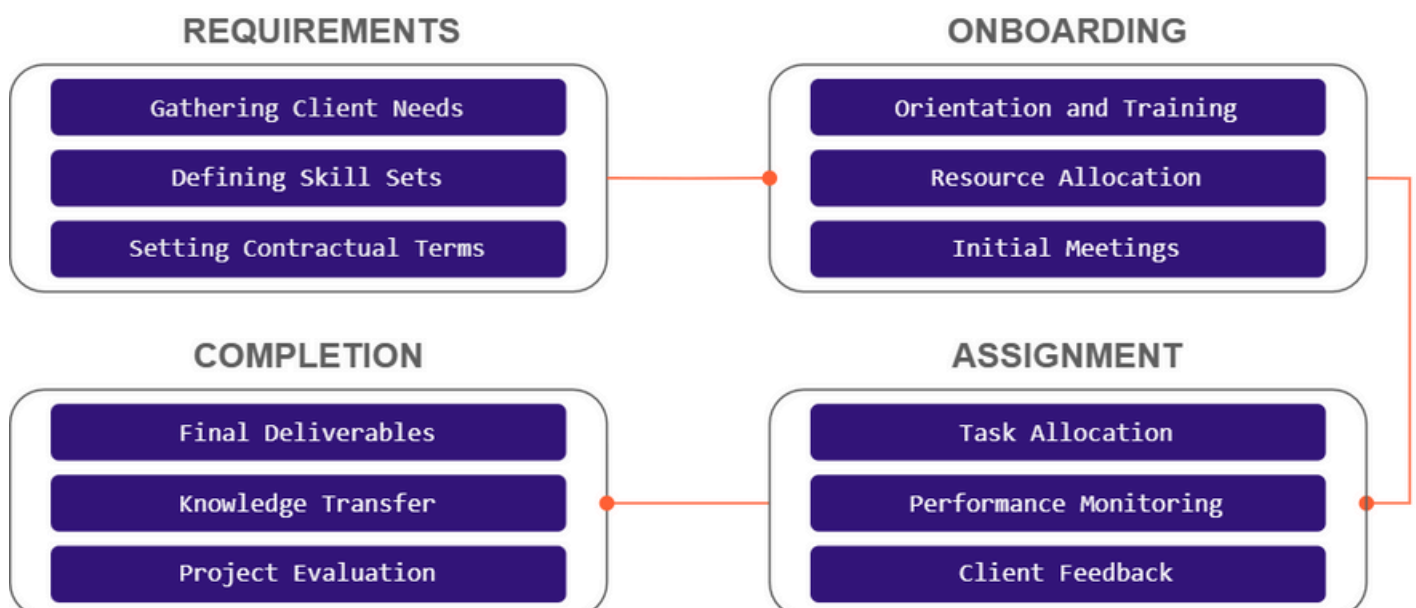

Solution

Staff Augmentation is one of the most popular ways of dealing with the lack of own technical resources and internal constraints in an organization.

IT Factory makes their qualified staff available to work for another company for the period agreed in the contract. We ensure that our candidates' competencies consistently align with the specific requirements of the project. What's also important is the fact that, if a need arises, any hired specialist can be substituted during the project, thus assuring the Client of continuity and uninterrupted service.

Working with our experts will enable you to put your ideas into practice and carry out even the most challenging IT plans. All our team experts have passed technical interviews and possess the required experience level. We recommend additional skill checks with your technical specialist alongside our technical interview, maintaining transparency from the very beginning of.

Benefits

Fulfilling the gap	Staff Augmentation proposal makes it possible to find tech talent globally and to add skilled technical resources to the in-house development team on a short- or long-term basis.
Flexibility	By using external specialists, you can allocate own employees to other much more strategic tasks.
Guaranteed savings	You avoid maintaining a long-term team of highly paid experts and save on time, training, necessary licenses, and office space.
No HR involvement	You eliminate time spent on recruiting new employees.
Full development control	You make decisions and manage the project in-house.
